

IMEFY evaluates its environmental performance considering:

Legal evaluation, where we review our compliance with legal requirements associated with our Organization.

Operational Control Plan of legal requirements, with periodic monitoring and evaluating the resulting data.

Analysis of future trends, both internal development of new processes, as well as analysis of legislative trends.

Based on the results of these evaluations, IMEFY Management prepares a Strategic Action Plan that develops:

- Objectives associated with risks.
- Objectives associated with prevention.
- Objectives associated with opportunities for improvement.
- Objectives associated with growth.

IMEFY has developed an operational system of risk detection in order to manage them according to their control and monitoring.

The result of this performance methodology allows us to be certified by UNE-EN-ISO 14001: 2004, as well as to ensure its compliance in aspects related to:

- Management of hazardous and non-hazardous waste.
- Energy minimization.
- Emissions control (carbon footprint).
- Optimization of resources in general.

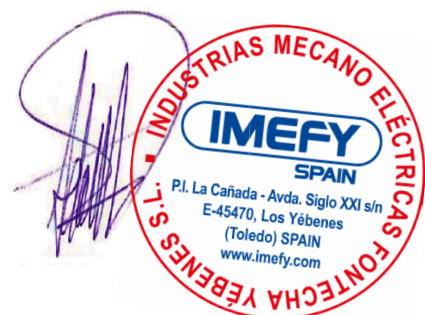

Evaluating the trend in the environmental performance of the Organization, we have:

- Reduction of hazardous waste in 2020 regarding 2019 in an estimated percentage of 1.05%.
- Reduction of non-hazardous waste in 2020 regarding 2019 in an estimated percentage of 0.4%.

In 2020, the IMEFY Carbon Footprint was certified again, considering the 2018 data as the base year, having managed to reduce CO₂eq emissions by 14% thanks to taking measures such as:

- Installation of a photovoltaic plant with the consequent generation of clean electricity for self-consumption.
- Acquisition of electrical energy entirely from renewable sources, thus obtaining a certificate of 0 emissions in this scope.

Likewise, IMEFY considers acquiring the commitment to continue reducing CO₂eq emissions by another 2% during 2021.

Signed: Management
